SKILLS

REACT

- ReactJS | NextJS | Angular | VueJS | React Native | NodeJS | Nest | Python | GO | Rest | GraphQL | gRPC | RPC | WSS MySQL | PostgreSQL | MongoDB | DynamoDB | Docker | K8s | Git | Nginx | Lua | Redis | Linux | AWS | GCP | Jenkins
- Component-based UI
- Virtual DOM
- Hooks API
- Context API
- Redux integration
- Static Generation (SSG)
- Server-side Rendering (SSR)
- API routes
- Native components
- Two-way data binding
- Dependency injection
- RxJS for asynchronous
- Reactive data binding
- Single-file components
- Composition API
- Vue Router for routing
- Cross-platform apps
- Expo SDK
- Non-blocking I/O
- Event-driven architecture
- Modules architecture
- Real-time data fetching
- SQL-based relational DB
- Docker Hub
- Serverless NoSQL database
- Comprehensive cloud services
- AWS Lambda

WORDPRESS

SHOPIFY

WEBFLOW

- Custom Post Type Creation
- Gutenberg Block Development
- REST API Integration
- Multilingual Site Setup (WPML)
- Custom Taxonomy Implementation
- Child Theme Development
- WordPress CLI (WP-CLI) Usage
- Database Optimization for WordPress
- ACF and WordPress Builders
- Liquid Template Programming
- Custom Shopify App Development
- Shopify Plus Features and Customization
- GraphQL API Integration
- Custom Checkout Process Development
- Shopify Flow Automation
- Advanced Inventory Management Solutions
- POS System Integration
- Custom Code Embedding (HTML/CSS/JS)
- Webflow API Utilization
- Advanced Interactions and Animations
- CMS Collection Filters and References
- Custom Form Integrations with External Services
- Membership Site Creation
- Lottie Animation Integration
- Webflow E-commerce Customization

PROFILE

As a dedicated and highly skilled web developer specializing in React, WordPress, Shopify, and Webflow, I bring 6 years of hands-on experience and a passion for creating dynamic, user-friendly websites. My expertise spans a wide range of web development tasks, from building custom themes and plugins to optimizing e-commerce platforms for performance and SEO.

React

I am a React developer with rock-solid modern web development skills. I am involved in building efficient and scalable applications in a component-based manner. I use React because it works with the virtual DOM and updates things reactively. I write components that are truly augmented thanks to React's Hooks API for great state and lifecycle handling. I use Context API to handle global state without prop-drilling through many layers.

I use Redux to manage complex states, helping to smoothly keep the data flowing and make state changes predictable. I can juggle the latest features of React well, such as Fast Refresh, to improve development experience and make applications work on a wide variety of different platforms with React Native's powerful native components and lots of development tools.

I find myself competent in NodeJS, which helps me in making non-blocking I/O operations for the very fact that my applications become much easier to scale and handle data that is incoming at any point in time. As for GraphQL, I am quite adept at building flexible and efficient APIs where clients can easily fetch data dynamically; hence, reducing bandwidth makes loading applications much faster.

My technical toolkit also carries a lot of enrichment in Docker and Kubernetes, which empowers the containerization of applications and their management for seamless deployment across varied environments, hence assuring consistent performance with much scalability.

I deal day in and day out with Agile, CI/CD software, making use of version control tools like Git, along with Jenkins in view of automating builds and deployments that ensure code quality is of high standard, hence effective when working with other people.

WordPress

I excel in custom theme development, plugin customization, and WooCommerce integration. My approach ensures sites are not only visually appealing but also secure, fast, and optimized for search engines. I'm adept at managing multisite networks and implementing advanced custom fields (ACF) to provide flexible content management solutions.

Shopify

In Shopify, I specialize in developing and customizing themes using Liquid, setting up and configuring stores, and integrating various payment gateways. I enhance user experiences with custom scripts and automate processes using Shopify Scripts and APIs. My focus is on creating high-converting e-commerce stores that align with clients' business goals.

Webflow

With Webflow, I leverage its powerful visual editor to create responsive, custom-designed websites. I manage dynamic content through Webflow's CMS, integrate third-party services like Zapier and Mailchimp, and set up e-commerce functionalities. My goal is to deliver sites that are not only visually stunning but also easy for clients to manage and update.

EDUCATION

Bachelors of Science in Electrical(Computer) Engineering Comsats university

2014-2019

- Gained hands-on experience with programming languages such as C++, Java, and Python.
- Developed a strong foundation in data structures, algorithms, and software engineering.
- Participated in team-based projects, enhancing collaboration and problem-solving skills.
- Developed a smart home automation system integrating hardware and software, utilizing microcontrollers, sensors, and a custom software interface.
- Attended workshops and seminars to stay updated with the latest advancements in technology.

EXPERIENCE

Iplex

2018-2020

Intern and Junior Web developer

- Developed responsive web pages using HTML/CSS.
- Implemented interactive features with JavaScript.
- Built server-side applications and scripts using PHP.
- Customized themes and managed content on WordPress.
- Managed databases and performed queries with MySQL.
- Used Git for version control and project management.
- Utilized Bootstrap for responsive design.
- Enhanced user experience with jQuery.

Zinda Agency

2021-2022

Web Specialist

- Developed and customized e-commerce stores using Shopify Liquid.
- Created custom designs and interactions with Webflow's visual editor.
- Implemented efficient data fetching methods with GraphQL.
- Deployed and managed web applications on AWS.
- Collaborated on UI/UX design projects using Figma.
- Optimized websites for search engines using SEO tools.
- Worked with ACF and Elementor projects

Deaff.org

2023 Present

Frontend Developer / Professional Content Creator

- Developed and maintained responsive web applications with React.js that work seamlessly on any device.
- Created reusable, efficient, modular styling modules that actually help make projects very scalable and maintainable with the help of SASS.
- I collaborated with the backend team to ensure everything fit well, used Git for versioning management, and made sure development standards were maintained.
- Produced high-quality digital content that further increased the reach and exposure of the organization. Managed and coordinated content with remote teams using Google Workspace.
- Features on Google Workspace that allow and enhance the workflow of content, document control, and collaboration in real-time across locations.
- Worked in a purpose-driven environment to help achieve organizational goals by using frontend technologies with a content management strategy.
